

**UBE3A clinical phenotype guidelines:**

**Mandatory criterion:**

Severe ID (if 5 years of age or older) or global developmental delay (if <5 years of age)

**In addition, the patient has to satisfy at least 4/5 of the following:**

- Ataxia/jerky movements
- Characteristic EEG
- Seizures
- Absent speech or less than 5 words (if at least 4 years of age)
- Frequent smiling

**Additional notes:** If information is provided such that a phenotype of Angelman syndrome is suspected, with specific minimal features used for the diagnosis, then this can be used for PP4 in lieu of the specific clinical features listed.
